

COMPLETE PERSONAL PORTFOLIO BLUEPRINT

From concept to live website - design, content, Firebase, admin panel, blog CMS, SEO, security and deployment

Prepared as a step-by-step build manual and prompt library

How to Use This Blueprint

This document is designed so you can build the portfolio one stage at a time without losing design consistency or technical control. Follow the phases in sequence. Use the included prompts in Antigravity, Codex, Cursor or another development assistant, and verify each checkpoint before moving forward.

1. Lock your brand positioning and content before development.
2. Create the public visual system and reusable components.
3. Build every public page using the reference-locked design rules.
4. Connect Firebase Authentication, Firestore and Storage.
5. Build the protected admin panel and publishing workflows.
6. Add the blog CMS, enquiry CRM, SEO, analytics and security.
7. Test desktop, tablet and mobile versions.
8. Deploy to Vercel and configure the production Firebase project.

Build Outcome

- A premium monochrome personal branding website for Ankit Nishad.
- A complete career, expertise and case-study portfolio.
- A full blog and insights publishing platform.
- A secure Firebase-powered admin dashboard.
- An internal enquiry and follow-up mini-CRM.
- SEO-ready public pages with dynamic metadata and schema markup.
- A scalable system that can be updated without changing code.

Important Accuracy Rule

Do not invent career dates, company history, metrics, qualifications, results, testimonials or project outcomes. When information is not confirmed, keep it editable in the admin dashboard and label expected impact separately from actual results.

Project Roadmap

PHASE	DELIVERABLE
Phase 1	Personal brand strategy and content preparation
Phase 2	Reference-locked visual design system
Phase 3	Technical architecture and project setup
Phase 4	Public website pages
Phase 5	Firebase data structure and security
Phase 6	Admin dashboard and CMS
Phase 7	Blog and insights platform
Phase 8	Enquiry CRM and follow-ups
Phase 9	SEO, analytics and performance
Phase 10	Testing, deployment and maintenance

Phase 1 - Personal Brand Strategy

1.1 Primary Positioning

Use the following professional identity across the portfolio:

Brand identity

Ankit Nishad
Business Development Manager - IT Sales & Business Automation

Primary positioning statement

I help businesses identify growth opportunities, understand operational challenges and connect with practical automation, custom software and digital solutions.

Supporting positioning

IT Sales • Client Acquisition • Lead Generation • Business Automation • Custom Software Solutions

1.2 Brand Pillars

- Business Development
- IT Sales
- Client Acquisition
- Requirement Discovery
- Business Process Understanding
- Software Solution Positioning
- Lead Generation
- LinkedIn Outreach
- Proposal Coordination
- Business Automation
- Digital Growth

1.3 Brand Personality

- Strategic and business-focused
- Professional but approachable
- Clear rather than overly technical
- Process-oriented and practical
- Confident without exaggerated claims
- Technology-aware, but not positioned as a software developer

1.4 Target Audience

- Founders and business owners
- CEOs, directors and operations heads
- Sales and growth leaders
- Manufacturing, healthcare, engineering, FMCG, pharma, retail and e-commerce businesses
- Companies dependent on Excel, WhatsApp, email and disconnected tools
- Businesses evaluating CRM, ERP, DMS, portals, automation or LinkedIn lead generation

Phase 1 - Content Collection Checklist

- ☐ Final professional headline and tagline
- ☐ High-resolution portrait for hero section
- ☐ Secondary working portrait for About page
- ☐ Current designation and company
- ☐ Exact career history with dates
- ☐ Education and certifications
- ☐ Verified skills and tools
- ☐ Verified professional metrics
- ☐ Project and consultation details
- ☐ Project screenshots or conceptual visuals
- ☐ LinkedIn URL and featured posts
- ☐ Email, phone and booking link
- ☐ Resume PDF
- ☐ Testimonials with permission
- ☐ Blog categories and first 5 article ideas
- ☐ Privacy policy and contact consent text

Recommended Content Folder Structure

Folder structure

```
portfolio-assets/  
  profile/  
    hero-portrait.webp  
    about-portrait.webp  
    resume.pdf  
  projects/  
    project-slug/  
      cover.webp  
      gallery-01.webp  
  blog/  
  logos/  
  documents/  
  social/
```

Phase 2 - Reference-Locked Design System

The supplied design board is the primary visual reference. The final public website must feel like the same design system: monochrome, editorial, premium, spacious and highly controlled.

2.1 Non-Negotiable Visual Rules

- Warm off-white backgrounds
- Black and charcoal typography
- Black-and-white portrait photography
- Large thin headings
- Generous white space
- Fine divider lines
- Minimal navigation
- Asymmetric but balanced layouts
- Dark premium footer
- Subtle animation only

2.2 Avoid

- Bright accent colours
- Gradients
- Glassmorphism
- Heavy shadows
- Generic SaaS cards
- Neon effects
- Overuse of icons
- Agency-style promotional sections
- Colourful admin charts
- Template-like developer portfolio layouts

2.3 Colour Tokens

TOKEN	HEX	USE
Primary Black	#111111	Headings, buttons, footer
Text Black	#202020	Main text
Dark Grey	#444444	Secondary headings
Muted Grey	#777777	Supporting content
Border Grey	#E6E6E6	Dividers and inputs
Soft Background	#F7F7F5	Cards and sections
Main Background	#FCFCFA	Page background
White	#FFFFFF	Content surfaces

Phase 2 - Typography and Layout

Typography

- Preferred: General Sans, Neue Montreal, Satoshi, Inter or Helvetica Neue.
- Hero heading: 110-150px desktop, 52-68px mobile.
- Page heading: 52-72px desktop.
- Section heading: 42-58px desktop.
- Body text: 15-18px with generous line height.
- Small labels: 11-13px, muted, optionally uppercase.

Layout

- Maximum content width: 1440px.
- Desktop side padding: 36-56px.
- Mobile side padding: 18-22px.
- Use a 12-column grid on desktop.
- Use section dividers and controlled vertical rhythm.
- Avoid placing every section inside cards.

Animation Language

- Fade-up on section entry
- Staggered reveal for rows and cards
- Subtle portrait and image parallax
- Arrow movement on hover
- Animated counters
- Timeline line drawing
- Smooth page transitions
- Reduced-motion support

Master Prompt A - Build the Public Portfolio UI

Paste this into Antigravity / Codex / Cursor

Create a premium, monochrome, editorial personal branding portfolio website for Ankit Nishad based strictly on the supplied reference design board. Preserve the same visual hierarchy, warm off-white background, oversized thin typography, black-and-white portrait treatment, generous whitespace, fine divider lines, asymmetric composition, minimal navigation and dark footer. Do not create a generic SaaS, agency or developer portfolio.

Position Ankit as a Business Development Manager working across IT Sales, Business Automation, Client Acquisition, Lead Generation, Requirement Discovery, Custom Software Consultation, LinkedIn Automation and Digital Growth.

Use Next.js 15+ App Router, TypeScript, Tailwind CSS and Framer Motion. Create reusable components and full responsive behaviour. Public routes: /, /about, /career, /expertise, /services, /work, /work/[slug], /process, /blog, /blog/[slug], /contact, /privacy-policy and a custom 404 page.

Use the exact monochrome token system: #111111, #202020, #444444, #777777, #E6E6E6, #F7F7F5, #FCFCFA and #FFFFFF. Use General Sans or Inter. Implement subtle fade-up, stagger, parallax, animated counters, timeline line draw, image zoom and page transitions. Respect prefers-reduced-motion.

All content must later be connected to Firebase. Build every section as a reusable data-driven component. Do not hard-code unverified claims. Include loading, error and empty states.

Phase 3 - Technical Architecture

3.1 Recommended Stack

- Next.js 15+ with App Router
- TypeScript
- Tailwind CSS
- Framer Motion
- Firebase Authentication
- Cloud Firestore
- Firebase Storage
- React Hook Form
- Zod validation
- TipTap or Lexical editor
- Lucide React icons
- Vercel deployment

3.2 Project Structure

Recommended source structure

```
src/  
  app/  
    (public)/  
      page.tsx  
      about/  
      career/  
      expertise/  
      services/  
      work/  
      blog/  
      contact/  
    admin/  
      login/  
      dashboard/  
      projects/  
      blog/  
      enquiries/  
      settings/  
  components/  
    layout/  
    sections/  
    portfolio/  
    blog/  
    admin/  
    forms/  
    ui/  
  lib/  
    firebase/  
    auth/  
    validation/  
    seo/  
  hooks/  
  types/  
  constants/  
  utils/
```

3.3 Environment Variables

.env.example

```
NEXT_PUBLIC_FIREBASE_API_KEY=  
NEXT_PUBLIC_FIREBASE_AUTH_DOMAIN=  
NEXT_PUBLIC_FIREBASE_PROJECT_ID=  
NEXT_PUBLIC_FIREBASE_STORAGE_BUCKET=  
NEXT_PUBLIC_FIREBASE_MESSAGING_SENDER_ID=  
NEXT_PUBLIC_FIREBASE_APP_ID=  
NEXT_PUBLIC_SITE_URL=  
FIREBASE_ADMIN_PROJECT_ID=  
FIREBASE_ADMIN_CLIENT_EMAIL=  
FIREBASE_ADMIN_PRIVATE_KEY=
```

Master Prompt B - Initialise the Project

Development prompt

Initialise a production-ready Next.js 15 App Router project with TypeScript, Tailwind CSS, ESLint and src directory. Install Framer Motion, Firebase modular SDK, React Hook Form, Zod, @hookform/resolvers, Lucide React and TipTap. Create a scalable folder architecture for public pages, admin pages, reusable components, Firebase services, validation schemas, SEO helpers and TypeScript types.

Set up global CSS variables for the monochrome design system. Create a root layout with local or optimised Google fonts, global metadata defaults, public header, footer and page-transition wrapper. Add error.tsx, loading.tsx, not-found.tsx and a reusable skeleton system. Add .env.example and do not expose server credentials to the client.

Phase 4 - Public Website Pages

4.1 Homepage

- Hero with large “Hello” heading, two editable metrics, personal introduction and monochrome portrait.
- Vertical professional label and current year.
- Introduction section with the statement “Business growth begins with understanding the right problem.”
- What I Do rows covering acquisition, discovery, qualification, solution positioning, proposal coordination and follow-up.
- Featured expertise.
- Selected work and case studies.
- Career preview.
- Working process.
- Latest blog posts.
- LinkedIn section.
- Final CTA and dark footer.

Homepage build prompt

Build the homepage to closely follow the reference board. Use a full-screen split hero: left side with two small metrics, oversized “Hello”, supporting sentence, primary CTA and scroll indicator; right side with a large monochrome portrait. Add a vertical label reading “IT Sales & Business Automation” and vertical year “2026”.

Below the hero, add Introduction, What I Do, Expertise, Selected Work, Career Preview, My Process, Latest Insights, LinkedIn and Contact CTA sections. Use horizontal rows and editorial grids rather than colourful cards. All sections must accept typed data props and support visibility and ordering from Firestore.

4.2 About Page

- Large “About Me” heading.
- Very light oversized AN monogram in the background.
- Monochrome secondary portrait.
- Professional biography and working philosophy.
- Personal information and contact links.
- Brand values and differentiators.
- Optional downloadable resume CTA.

About page prompt

Create an editorial About page with a large heading, faded AN background monogram, monochrome working portrait and two-column biography layout. Explain that Ankit works between business communication and technology execution, understands client processes, structures requirements and coordinates the correct solution. Add professional information, core principles, personal approach and a resume download. Preserve large whitespace and thin dividers.

4.3 Career and Experience Pages

- Detailed vertical career timeline.
- Separate current-role spotlight.
- Career entries with role, organisation, dates, employment type, location, summary, responsibilities, achievements, tools and skills.
- Education and certifications can be separate timeline groups.
- Current role visually highlighted.

Career page prompt

Build a premium vertical career timeline. Keep dates on the left, a thin animated timeline in the centre and role details on the right. Each entry must support designation, organisation, dates, employment type, work mode, location, description, responsibilities, achievements, tools, skills, projects, industry exposure, logo and current-role flag. Add a line-draw scroll animation and reveal each milestone sequentially.

4.4 Expertise and Services

- Expertise categories: Business Development, IT Sales, Lead Generation, Client Communication, Business Automation and Solution Coordination.
- Skills can use level labels or editable percentages.
- Services displayed as horizontal numbered rows.
- Each service links to related work or contact CTA.

Expertise page prompt

Create a Skills & Expertise page with a large heading, concise introduction and grouped capability sections. Support both proficiency-label mode and percentage-bar mode. Add animated horizontal bars only when percentages are explicitly entered. Include verified metrics below. Keep the design monochrome and editorial.

Services page prompt

Create a Services page using large numbered horizontal rows, thin separators and subtle arrow interactions. Services: Business Automation, Custom Software Consultation, IT Sales and Solution Discovery, LinkedIn Automation, Lead Generation, CRM/ERP/DMS Consultation, E-commerce Solutions and Business Process Mapping. Each service must have short description, detailed content, ideal client, problems solved, related industries, related projects and CTA.

4.5 Portfolio and Case Studies

- Filterable work archive.
- Project types include consultation, requirement discovery, proposal, process audit, concept and completed implementation.
- Status labels prevent misleading claims.
- Detailed case-study pages with Ankit's role clearly stated.
- Project gallery, process flow, modules, integrations and impact.

Work archive prompt

Build a filterable Selected Work page with an asymmetric editorial grid. Filters: All, Automation, CRM/ERP, DMS, Web, E-commerce, LinkedIn Automation and Consulting. Each project card includes image, title, industry, year, project type, status and arrow. Use Framer Motion layout animations, image zoom, dark overlay and cursor label "View Project".

Case-study page prompt

Create a detailed case-study page with project title, industry, engagement type, status, year, timeline, platform and confidentiality label. Include sections: Client Context, Business Challenge, Current Process, Operational Gaps, Requirement Summary, Proposed Solution, Core Modules, Suggested Integrations, Technology Stack, Expected Impact, Actual Results, Ankit's Role and Next Steps. Use a large monochrome gallery, optional process flow, metric cards and next-project navigation. Never present expected impact as achieved results.

4.6 Process, Contact and Footer

Process page prompt

Create a My Process page with eight stages: Research, Connect, Discover, Qualify, Structure, Present, Follow Up and Handover. Use large numbers, horizontal flow on desktop, vertical flow on mobile, animated arrows and sequential reveals. Each step should explain Ankit's contribution clearly.

Contact page prompt

Create a two-column contact page. Left side contains email, phone, LinkedIn, booking link, location and availability. Right side contains a clean consultation form with fields for full name, company, designation, work email, phone, LinkedIn profile, website, industry, company size, current tools, current process, challenge, service, budget, timeline, preferred meeting date/time and source. Use Zod validation, accessible error states and Firebase submission.

Footer prompt

Create a dark #151515 footer with oversized text "Let's turn your business challenge into the right opportunity." Include Book A Call CTA, Ankit's name and role, navigation, services, resources, social links and a large faded AN monogram. Add subtle magnetic hover and underline animation.

Phase 5 - Firebase Architecture

5.1 Firebase Services

- Firebase Authentication for admin access.
- Firestore for all public and private content.
- Firebase Storage for portraits, project media, blog images and documents.
- Optional Cloud Functions for scheduled posts, notifications and image processing.

5.2 Core Collections

Collections

```
adminUsers

```

5.3 Essential Data Schemas

Profile schema

```
{
  fullName: string,
  professionalHeadline: string,
  shortTagline: string,
  shortBio: string,
  fullBio: string,
  currentRole: string,
  currentCompany: string,
  location: string,
  availability: string,
  email: string,
  phone: string,
  linkedinUrl: string,
  bookingUrl: string,
  resumeUrl: string,
  heroImageUrl: string,
  aboutImageUrl: string,
  updatedAt: Timestamp
}
```

Career schema

```
{
  designation: string,
  company: string,
  employmentType: string,
  startDate: string,
  endDate: string,
  isCurrent: boolean,
  location: string,
  workMode: string,
  summary: string,
  responsibilities: string[],
  achievements: string[],
  skills: string[],
  tools: string[],
  industries: string[],
  projects: string[],
  companyLogoUrl: string,
  linkedinReferenceUrl: string,
  order: number,
  published: boolean,
  createdAt: Timestamp,
  updatedAt: Timestamp
}
```

Project schema

```
{
  title: string,
  slug: string,
  clientName: string,
  hideClientName: boolean,
  industry: string,
  projectType: string,
  status: string,
  year: string,
  timeline: string,
  platform: string,
  shortDescription: string,
  businessContext: string,
  currentProcess: string,
  challenge: string,
  operationalGaps: string[],
  requirementSummary: string,
  proposedSolution: string,
  modules: string[],
  integrations: string[],
  technologies: string[],
  expectedImpact: string[],
  actualResults: string[],
  ankitRoles: string[],
  nextSteps: string,
  thumbnailUrl: string,
  coverImageUrl: string,
  galleryImages: string[],
  relatedProjectIds: string[],
  featured: boolean,
  statusPublic: boolean,
  published: boolean,
  seoTitle: string,
  seoDescription: string,
  createdAt: Timestamp,
  updatedAt: Timestamp
}
```

Enquiry schema

```
{
  fullName: string,
  companyName: string,
  designation: string,
  email: string,
  phone: string,
  linkedinUrl: string,
  website: string,
  industry: string,
  companySize: string,
  currentTools: string[],
  currentProcess: string,
  challenge: string,
  serviceRequired: string,
  budget: string,
  timeline: string,
  preferredDate: string,
  preferredTime: string,
  source: string,
  status: string,
  priority: string,
}
```

```
notes: string,  
nextFollowUpAt: Timestamp | null,  
createdAt: Timestamp,  
updatedAt: Timestamp  
}
```

5.4 Security and Validation

- Public users can read only published content.
- Public users can create enquiries with strict field validation.
- Public users cannot read, update or delete enquiries.
- Only authenticated authorised admins can write content.
- Enforce roles in Firestore rules, not only in the frontend.
- Validate MIME type and file size in Storage rules.
- Rate-limit public forms through server actions or Cloud Functions.
- Use server-side sanitisation for rich content.

Firestore security prompt

```
Implement Firestore and Storage security rules. Public users may read documents only when published == true or active == true. Public users may create enquiries only when required fields are valid and within length limits; deny public read/update/delete. Admin access must check request.auth.uid against adminUsers and role. Storage should allow public read only for approved public paths and allow uploads/deletes only to authorised admins. Validate contentType and maximum file size.
```

Phase 6 - Admin Dashboard and CMS

6.1 Protected Admin Routes

Admin routes

```
/admin/login  
/admin/dashboard  
/admin/profile  
/admin/homepage  
/admin/career  
/admin/skills  
/admin/services  
/admin/projects  
/admin/blog  
/admin/blog/categories  
/admin/blog/tags  
/admin/enquiries  
/admin/follow-ups  
/admin/media  
/admin/navigation  
/admin/seo  
/admin/settings  
/admin/users  
/admin/activity
```

6.2 Admin Visual Rules

- Dark collapsible sidebar.
- Off-white content background.
- White cards with thin borders.
- No colourful SaaS-style dashboard.
- Compact status badges.
- Responsive tables.
- Sticky page actions on mobile.
- Clear draft, preview, publish and archive actions.

6.3 Admin Roles

ROLE	ACCESS
Super Admin	Full system access
Editor	Pages, projects and blog content
Author	Assigned blog posts
Lead Manager	Enquiries and follow-ups
Viewer	Read-only dashboard

6.4 Dashboard Overview

- Total projects and draft projects
- Published and draft blog posts
- New enquiries
- Today's and overdue follow-ups
- Recent admin activity
- Storage usage
- Recently updated content
- Quick actions

Admin dashboard prompt

Build a protected Firebase-powered admin dashboard in the same monochrome brand system. Add a fixed collapsible sidebar, top header, breadcrumb, page title and contextual actions. Dashboard cards: published projects, drafts, blog posts, enquiries, follow-ups and storage. Add recent enquiries, latest drafts, recently updated projects, content completeness and activity log. Use greyscale charts only. Implement loading, empty, error and permission states.

6.5 Content Management Features

- Create, edit, duplicate, preview, publish, unpublish, archive and soft delete.
- Drag-and-drop ordering.
- Repeatable fields for responsibilities, achievements, modules and metrics.
- Autosave drafts where practical.
- Revision history for blog posts and case studies.
- Activity logs for important admin actions.
- Bulk actions for posts and enquiries.
- Confirmation dialogs for destructive actions.

CMS form prompt

For each admin content type, build a validated React Hook Form with Zod. Include save draft, preview, publish, archive and delete actions. Add createdAt, updatedAt, createdBy and updatedBy audit fields. Use reusable form components for text, textarea, slug, tags, rich content, repeatable arrays, image upload, toggle, status, ordering and SEO. Show clear success/error notifications and prevent accidental navigation with unsaved changes.

Phase 7 - Blog and Insights CMS

7.1 Blog Purpose

The blog should build authority around IT sales, business development, lead generation, automation, software consultation, requirement discovery, client communication and digital growth.

Recommended Categories

- IT Sales
- Business Development
- Business Automation
- Lead Generation
- Custom Software
- CRM and ERP
- LinkedIn Strategy
- Client Communication
- Digital Growth

Starter Article Ideas

- How to Qualify a Custom Software Lead
- Why Requirement Discovery Matters in IT Sales
- Custom Software vs Ready-Made Software
- When Businesses Outgrow Excel and WhatsApp
- How LinkedIn Supports B2B Client Acquisition
- Common Mistakes in Software Requirement Discussions
- How to Prepare for a Software Discovery Meeting
- When a Business Actually Needs an ERP
- Why Follow-up Matters in B2B Sales

7.2 Public Blog Experience

- Featured article hero.
- Editorial post grid.
- Category and tag archives.
- Search and pagination.
- Reading time and publish date.
- Author profile.
- Related posts.
- Previous and next article navigation.
- Table of contents on long articles.
- LinkedIn and consultation CTA.

Public blog prompt

Build a monochrome editorial /blog page with a large Insights heading, one featured article and a responsive latest-post grid. Add search, category filters, tag filters and pagination. Each card shows black-and-white image, category, title, excerpt, date, reading time and arrow. Build /blog/[slug] with large title, excerpt, author, publish/update date, reading time, share actions, table of contents, rich content renderer, author box, tags, related posts, previous/next article and contact CTA.

7.3 Blog Admin and Editor

- TipTap or Lexical rich editor.
- Autosave and manual save.
- Draft, review, scheduled, published and archived statuses.
- Featured image and social sharing image.
- SEO controls.
- Word count and estimated reading time.
- Revision history.
- Category, tags, author and related posts.
- Scheduled publishing through Cloud Functions or a scheduler.

Blog editor prompt

Build a TipTap-based blog editor with headings, paragraphs, bold, italic, underline, links, lists, task lists, blockquotes, tables, images, gallery, video/embed, callouts, dividers, code blocks and table of contents. Centre editor with a right settings sidebar containing status, schedule, author, category, tags, featured image, OG image, excerpt, SEO, related posts and comments toggle. Add autosave, preview, word count, reading time, revision history and unsaved-change warning.

Blog post schema

```
{
  title: string,
  slug: string,
  excerpt: string,
  content: JSONContent,
  plainTextContent: string,
  authorId: string,
  categoryId: string,
  tagIds: string[],
  featuredImageUrl: string,
  featuredImageAlt: string,
  openGraphImageUrl: string,
  status: "draft" | "review" | "scheduled" | "published" | "archived",
  featured: boolean,
  commentsEnabled: boolean,
  readingTime: number,
  wordCount: number,
  publishedAt: Timestamp | null,
  scheduledPublishAt: Timestamp | null,
  seoTitle: string,
  seoDescription: string,
  focusKeyword: string,
  canonicalUrl: string,
  noindex: boolean,
  nofollow: boolean,
  relatedPostIds: string[],
  viewCount: number,
  createdBy: string,
  updatedBy: string,
  createdAt: Timestamp,
  updatedAt: Timestamp
}
```

Phase 8 - Enquiry CRM and Follow-ups

8.1 Enquiry Pipeline

Statuses

New → Contacted → Meeting Scheduled → Qualified → Proposal → Follow-up → Converted / Not Relevant / Closed / Archived

8.2 Enquiry List Features

- Search by name, company, email and phone.
- Filter by status, priority, service, industry, source and date.
- Quick actions for email, phone, WhatsApp and LinkedIn.
- Bulk status change and CSV export.
- Internal notes and full status history.
- Follow-up scheduling and overdue indicators.

8.3 Follow-up Types

- Call
- Email
- LinkedIn
- WhatsApp
- Meeting
- Proposal Reminder
- General Follow-up

CRM prompt

Build a mini-CRM inside the admin dashboard. Create enquiry list and detail pages. Support search, filters, status, priority, source, internal notes, activity history and follow-up scheduling. Add Today, Overdue, Upcoming and Completed follow-up views. Include quick actions to copy contact details, open WhatsApp, open LinkedIn and compose email. Allow CSV export and spam deletion. Restrict all data to authorised roles.

Phase 9 - Media, SEO and Analytics

9.1 Media Library

- Drag-and-drop upload.
- Upload progress and preview.
- Search and filter by type/date.
- Alt text and caption management.
- Copy URL, replace and delete.
- Usage reference and unused-file detection.
- Image compression and responsive derivatives.

Media library prompt

Build a Firebase Storage media library supporting JPG, PNG, WebP, SVG and PDF. Include drag-and-drop upload, progress, validation, thumbnail grid, search, type/date filters, alt text, caption, copy URL, replace, delete and usage references. Compress images before upload and save metadata to Firestore.

9.2 SEO Requirements

- Dynamic titles and descriptions.
- Canonical URLs.
- Open Graph and Twitter metadata.
- XML sitemap and robots.txt.
- Person, ProfessionalService, Article, Breadcrumb, FAQ and HowTo schema where applicable.
- SEO-friendly slugs.
- Image alt text.
- Page-level SEO overrides.

SEO prompt

Implement a central SEO system. Add global settings and page-level overrides for title, description, canonical URL, Open Graph, Twitter image, noindex and nofollow. Generate sitemap.xml and robots.txt. Add Person schema for Ankit Nishad, ProfessionalService schema, Article/BlogPosting schema, Breadcrumb schema and conditional FAQ/HowTo schema. Add admin SEO checks for missing title, description, image alt, heading structure, duplicate slug and internal links.

9.3 Analytics

- Google Analytics 4 or privacy-friendly alternative.
- Google Search Console verification.
- Track contact-form submissions.
- Track Book A Call and LinkedIn clicks.
- Track project and blog views.
- Avoid exposing personal enquiry data in analytics.

Phase 10 - Testing and Quality Assurance

10.1 Functional Testing

- ☐ All navigation links work
- ☐ Admin login and logout work
- ☐ Role restrictions work
- ☐ CRUD operations work for every content type
- ☐ Draft and publish workflows work
- ☐ Image upload and deletion work
- ☐ Contact form saves correctly
- ☐ Follow-up dates and status history work
- ☐ Blog search and filters work
- ☐ Scheduled publishing works
- ☐ SEO metadata renders correctly

10.2 Responsive Testing

- ☐ 375px mobile
- ☐ 430px mobile
- ☐ 768px tablet
- ☐ 1024px laptop
- ☐ 1440px desktop
- ☐ 1920px large desktop
- ☐ No horizontal overflow
- ☐ No cropped images
- ☐ Readable typography
- ☐ Usable admin tables and editor

10.3 Performance and Accessibility

- ☐ Lighthouse Performance 90+ target
- ☐ Accessibility 95+ target
- ☐ Semantic headings
- ☐ Keyboard navigation
- ☐ Visible focus states
- ☐ Form labels and error associations
- ☐ Reduced-motion support
- ☐ Optimised images and fonts
- ☐ Lazy loading and code splitting

10.4 Deployment

9. Create separate Firebase development and production projects.
10. Add production environment variables in Vercel.
11. Deploy Firestore indexes and security rules.
12. Deploy Storage rules.
13. Create the first Super Admin record.
14. Deploy Next.js application to Vercel.
15. Connect custom domain.
16. Verify SSL, canonical domain and redirects.
17. Submit sitemap to Search Console.
18. Run final production testing.

Deployment prompt

Prepare the project for production deployment on Vercel with Firebase. Add environment validation, development/production Firebase configuration, secure server credentials, Firestore indexes, rules deployment scripts and a setup guide. Configure custom domain, metadata base URL, sitemap, robots, analytics and error monitoring. Create a first-admin setup procedure that does not leave a public registration route.

Exact Build Order - Follow This Sequence

19. Collect verified content and finalise personal positioning.
20. Prepare hero portrait, about portrait, resume and project assets.
21. Initialise the Next.js project and design tokens.
22. Build the public header, footer and base layouts.
23. Build the homepage and verify visual match to the reference.
24. Build About, Career, Expertise, Services and Process pages.
25. Build the work archive and case-study template.
26. Build the public blog archive and article template.
27. Configure Firebase client and server SDKs.
28. Create Firestore collections, types and service layer.
29. Add authentication, roles and route protection.
30. Build the admin shell and dashboard overview.
31. Build profile, homepage, career, skills and services CMS.
32. Build project and case-study CMS.
33. Build media library.
34. Build blog editor, categories, tags and publishing flow.
35. Build enquiry CRM and follow-ups.
36. Add SEO settings, schema and analytics.
37. Add security rules and data validation.
38. Test all breakpoints and workflows.
39. Deploy and complete production verification.

Final Unified Master Prompt

Use this when you want the AI builder to understand the entire project

Build a complete production-ready personal branding platform for Ankit Nishad. The public website must match the supplied monochrome editorial reference design as closely as possible: warm off-white background, oversized thin typography, black-and-white portraits, generous whitespace, fine dividers, asymmetric layouts, subtle animations and a dark footer. Do not create a generic SaaS, agency or developer template.

Position Ankit as a Business Development Manager working across IT Sales, Business Automation, Client Acquisition, Lead Generation, Requirement Discovery, Custom Software Consultation, LinkedIn Automation and Digital Growth. Use accurate, first-person content and never invent career history, project results, metrics or testimonials.

Use Next.js 15 App Router, TypeScript, Tailwind CSS, Framer Motion, Firebase Authentication, Firestore, Firebase Storage, React Hook Form, Zod, TipTap and Lucide React. Public pages: Home, About, Career, Expertise, Services, Work, Case Study, Process, Blog, Blog Article, Contact, Privacy and 404. Protected admin pages: Dashboard, Profile, Homepage, Career, Skills, Services, Projects, Blog, Categories, Tags, Enquiries, Follow-ups, Media, Navigation, SEO, Settings, Users and Activity.

Implement a role-based admin CMS with Super Admin, Editor, Author, Lead Manager and Viewer roles. Support draft, preview, publish, unpublish, schedule, archive, soft delete, revision history, activity logs and drag-and-drop ordering. Add a rich blog editor, category/tag management, featured posts, scheduled publishing, SEO controls and related posts. Add an enquiry mini-CRM with statuses, priority, notes, follow-ups, quick contact actions and CSV export.

Create secure Firestore and Storage rules. Public users may read only published content and submit validated enquiries. They may not access drafts, admin data or enquiries. Validate all public forms, sanitise rich content, rate-limit submissions and protect server credentials.

Implement dynamic metadata, canonical URLs, sitemap, robots, Person schema, ProfessionalService schema, Article schema and Breadcrumb schema. Optimise images, fonts, queries and bundles. Respect accessibility and reduced-motion preferences. Target Lighthouse scores above 90 for performance and above 95 for accessibility, best practices and SEO.

Deliver clean reusable code, TypeScript types, Firebase schemas, security rules, indexes, seed data, .env.example, setup documentation, admin creation procedure and production deployment instructions.

Final Acceptance Checklist

Brand and Design

- ☐ Reference-style monochrome design is maintained
- ☐ Personal brand remains focused on Ankit Nishad
- ☐ Public site does not look like a company or agency template
- ☐ Portraits and images are monochrome and properly optimised
- ☐ Animations are subtle and consistent

Content

- ☐ Career information is verified
- ☐ Projects have accurate status labels
- ☐ Ankit's actual role is clearly stated
- ☐ Expected impact is separated from actual results
- ☐ No fake metrics or testimonials

Technology

- ☐ Firebase authentication is protected
- ☐ Firestore and Storage rules are deployed
- ☐ Admin roles work correctly
- ☐ Blog editor and publishing flow work
- ☐ Enquiry CRM and follow-ups work
- ☐ SEO and schema output is valid
- ☐ Backups and export options are documented

Launch

- ☐ Custom domain connected
- ☐ Production environment variables configured
- ☐ Search Console and analytics configured
- ☐ Sitemap submitted
- ☐ Final mobile and desktop test completed
- ☐ No console errors
- ☐ Contact form notification tested

BUILD A PERSONAL BRAND THAT SHOWS BOTH SIDES OF YOUR VALUE

Business understanding + technology opportunity + clear professional communication

Ankit Nishad
